

## Opioid Use History Screen (DOC-2945/2945A)

Revised 4/4/2023

### Overview:

The Opioid Epidemic continues to have a devastating impact on the ability of clients in our charge and person(s) in our care (PIOC) to successfully reenter the community and discharge from supervision. The Opioid Use History Screen (DOC-2945/DOC-2945A) is a way to systematically screen and identify individuals in our system with opiate use history, provide PIOC with more education concerning intervention and treatment options including Medication Assisted Treatment (MAT) prior to release, and to create a coordinated transition process with Community Corrections and MAT/treatment providers.

### Social Worker/Treatment Specialist Responsibilities:

While reviewing the DOC-745 with the PIOC, complete the [DOC-2945/DOC-2945A Opioid Use History Screening Questionnaire](#) for any PIOC that scores probable or highly probable on the Substance Abuse scale, and there is insufficient evidence to determine whether a history of opioid use exists. Then indicate the PIOC opioid use history in the COMPAS Cautionary Information section as indicated by the DOC-2945/DOC-2945A. If there is sufficient evidence of a history of opioid use, the screening tool does not need to be completed; however, the information still needs to be updated in the Cautionary Information section of COMPAS.

- If the PIOC has been identified as having a history of opioid use after completing the Opioid Use History Screening Questionnaire (DOC 2945/DOC 2945A) or a review of other reliable sources, if available:
  1. Make a note in COMPAS that the screening was completed.
  2. Forward the DOC-2945/DOC-2945A to the Agent of Record.
  3. Indicate the PIOC opioid use history in the COMPAS Cautionary Information section. To access the COMPAS Cautionary Information section: Person Summary Page > Person Summary Navigation Header > Cautionary Information
    - a. If a PIOC has been previously screened using the DOC-2945/DOC 2945A Opioid Use History Screen and was found to not need cautionary information added in COMPAS; however, the results of the most recent screening indicate a change and cautionary information needs to be added, add a new entry to indicate the screening was completed and check the alert box. Complete a

COMPAS note to indicate the completion of the screening and the addition of the cautionary information.

- b. If PIOC has been previously screened using the DOC-2945/DOC 2945A Opioid Use History Screen, and the results of the most recent screening indicate the same results, no new entry is needed. Complete a COMPAS note to indicate the screening was completed, resulting in the same outcome as the previous screening(s).
4. Discuss options for MAT. Planning at this stage will include provision of educational materials concerning MAT and reviewing potential MAT providers in the PIOC releasing community. Discuss with the PIOC their interest in and comfort level with engaging in treatment upon release.
  5. If the PIOC is interested in and agrees to attend treatment, coordinate with the Agent of Record who (DAI or DCC) will make the referral; with a goal to continue programming/treatment upon release. If a referral is made, a DOC-1163A Release of Information is required.
  6. Provide PIOC with information regarding any treatment referrals made.
- If the PIOC has been found to not have a history of opioid use via use of the screening tool:
    1. Make a note in COMPAS that the screen was completed.
    2. Forward the DOC 2945/DOC 2945A to the Agent of Record.
  - If a PIOC has been identified as not having a history of opioid use via use of the screening tool or other reliable sources, if available; however, between the time the screen was completed and their release, they are found guilty of and have a positive UA for using opioids, a new screening shall be conducted.
